1. source install/setup.bash (dijalankan setiap sebelum ros2 launch/run)
2. ros2 launch wit_ros2_imu rviz_and_imu.launch.py
3. ros2 launch sllidar_ros2 sllidar_c1_launch.py
4. ros2 run stepper_controller mapping_3d
5. ros2 launch stepper_controller stepper_launch.py
6. rviz2

Ngerun sekali run:
source install/setup.bash
ros2 launch stepper_controller mapping_system.launch.py

Run rviz2 remote a.k.a foxgloves:
ros2 launch foxglove_bridge foxglove_bridge_launch.xml

SLAM BARU:
Terminal 1:
source ~/ros2_ws/install/setup.bash
ros2 launch stepper_controller mapping_system.launch.py

Terminal 2:
source ~/ros2_ws/install/setup.bash
ros2 run rtabmap_odom icp_odometry \
  --ros-args \
  -r scan_cloud:=/map_3d \
  -r scan:=/dummy_scan

Note baterai: 6.73v mati

ros2 bag record \
/scan \
/imu/data_raw \
/stepper/angle \
/map_3d \
/odom \
/tf \
-s mcap \
-o ~/bags/test_lab_02

source ~/ros2_ws/install/setup.bash
ros2 bag play ~/bags/test_lab_01

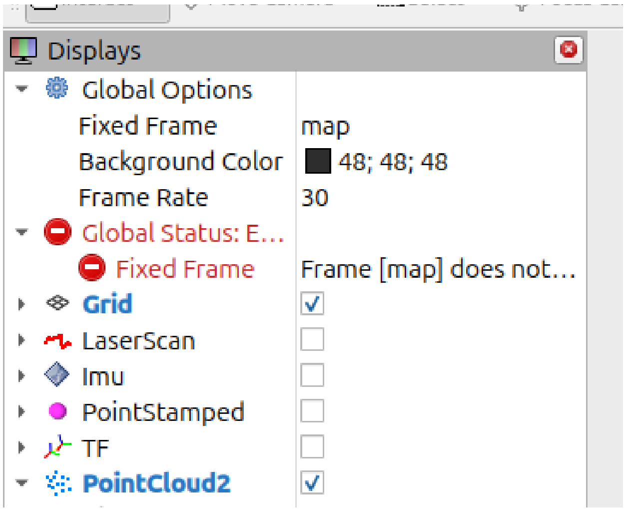
Atur Kecepatan motor
Lambat
ros2 topic pub /stepper/speed std_msgs/msg/Float32 "data: 0.01" --once

Normal
ros2 topic pub /stepper/speed std_msgs/msg/Float32 "data: 0.005" --once

```
# Cepat
ros2 topic pub /stepper/speed std_msgs/msg/Float32 "data: 0.002" --once

# Sangat lambat
ros2 topic pub /stepper/speed std_msgs/msg/Float32 "data: 0.05" --once
```

Display yang perlu ditampilkan:



```
ros2 bag record \
  /scan /imu/data_raw /stepper/angle /map_3d /odom /tf /tf_static \
  -s mcap \
  --compression-mode file --compression-format zstd \
```

-o ~/bags/test_om_3

1. Atur kode untuk sekali muter aja gausah muter terus-terusan
2. Atur supaya setelah kode itu langsung kerecord
3. Apakah ros2bag record tuh abgusnya ketika alatnya jalan terus distop waktu selesai atau ros2bag record ketika alatnya selesai jalan
4. Cari tau cara untuk ngelurusin stepper, misal stepper kondisinya ga dalam keadaan yang pas. Setau kemarin mas adwa bilang ada imu 50rb an yang bisa ngirim data 0 derajat jadi kalau minus kedetect terus mungkin bisa dilurusin atau dibalikin gitulah
5. Coba bandingin 1x sweep sampai emang di berapa kali sweep baru bagusnya berapa
6. Cara pakai cloudcom, ngukur yang benar dari alat ke objek yang mau dideteksi nantinya (dah bisa grid)
7.

1. Drone digerakin pake remote,
2. Drone hover
3. Run mapping ssitem l;aunch,
